ACCESS CONTROL

SMART SECURITY
TIME MANAGEMENT

Full scalable, intuitive and easy to use

J A V I N

Fully integrated

controller are all fully intelligent and can be used in standalone or networked.

Large user database

30,000 card user (upgradable to 100,000 card users). Event transaction 30,000 in controller. unlimited event transaction store in PC

Small to large scale business

J A V I N support from 1 single door up to 1,016 doors to meet your business requirement

Centralised control for multiple site

now you can monitor all your outlet/branch activities at different location live in your main office

Photo pop up

any experience on difficulties to track a invalid entry person details from transaction report? J A V I N make security easy where it will automatic pop up the person photo, name, sex and card no for fast recognise and take action

True TCP/IP

controller are built to network TCP/IP and not using converter to convert analog to TCP/IP. This create more powerful in network and increase the stability and performance.

Enhanced Security

Local and Global APB (Anti-PassBack) enable more security. It enforce all personal to clock in and clock out for all the activity. This will avoid some people "follow" other person IN/OUT without clock their own card.

Fully integration

no more hassle to control different type of system in various hardware. J A V I N allow you to control elevator, lift, carpark, door access, CCTV, biometric all under one software

Customize report

now, you can generate report information in your own way. you can sort the report by name, time, data, day, month and event. J A V I N save your time doing report manually and increase the work performance.
